RD

1. Claims 1-22 are presented for examination.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Zeineh (US 6,606,413).
4. As per claim 1, Zeineh discloses the invention as claimed including a method for transmitting packets from a computer onto a network, said method comprising the acts: receiving at least two data sets (abstract, Videographic images); determining a priority value for each of the at least two data sets (abstract, decomposed into detail levels); composing a composite data set comprising portions of the at least two data sets such that an amount of data from each of the data sets within the composite data set is based upon relative priorities between each of the at least two data sets (abstract, Images are constructed vertically ...; and

Fig. 6); and transmitting the composite data set onto the network (abstract, Images are transformed,... for transmission).

5. As per claim 16, the claim is rejected for the same reason as claim 1 above. In addition, Zeineh discloses a buffer to store a plurality of packets received from at least one client (42, Fig. 4); packet in the buffer has a priority value that at least partially determine a queue order (Fig. 6; and col. 12, lines 33-41); and transmitter to transmit prioritized packets from the buffer (col. 12, lines 54-58).

6. Claim 2-15 and 17-22 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims.

29. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nabil M El-Hady whose telephone number is (703) 308-7990. The examiner can normally be reached on 9:00 - 4:00.
